

Hitesh Rawat

B.Tech. Computer Science Engineering | Jaipur, India
23ucs595@lnmiit.ac.in | +91-7455085375 | LinkedIn | GitHub | LeetCode

PROFESSIONAL SUMMARY

Computer Science undergraduate at The LNM Institute of Information Technology specializing in full-stack development with React, TypeScript, Node.js, Express.js, PostgreSQL, and Prisma. Experienced in building production-style applications with REST APIs, multi-tenant architecture, role-based access control, authentication, transactional workflows, and relational database design. Strong foundation in Data Structures & Algorithms, Object-Oriented Programming, and DBMS, with hands-on experience across SaaS, ERP, fleet operations, asset governance, and AI-integrated applications.

EDUCATION

The LNM Institute of Information Technology

B.Tech. in Computer Science Engineering (CGPA: 6.27/10)

Samar Study Hall

Class XII, CBSE (95.20%)

Jaipur, India

2023 – 2027

Kashipur, India

2022

TECHNICAL SKILLS

Languages: C++, C, JavaScript, TypeScript, Python, SQL, HTML, CSS

Frontend: React.js, Vite, React Router, Zustand, Axios, Bootstrap, GSAP, Recharts

Backend: Node.js, Express.js, REST APIs, Prisma ORM, JWT, Session Authentication, Zod

Databases: PostgreSQL, MongoDB, MySQL

Tools/Platforms: Git, GitHub, Docker, Linux, Vercel, Render

PROJECTS

SwiftBill – GST-Compliant Billing & Inventory Management System

GitHub

Key Skills: React, Node.js, Express.js, Prisma ORM, PostgreSQL, JWT Authentication, REST APIs, Vite, Recharts
Built a full-stack billing and inventory management platform for small businesses to generate GST-compliant invoices and track stock. Designed the relational schema in PostgreSQL and implemented CGST/SGST/IGST tax computation based on intra-state vs. inter-state party location, party/ledger management with running receivable and payable balances, and atomic sales/purchase transactions using Prisma's transaction API to keep inventory stock and party balances consistent on every write. Added downloadable PDF invoice generation and an e-way bill threshold check for transactions above INR 50,000, demonstrating financial data integrity, tax-domain logic, and relational schema design.

FleetPilot – Fleet Operations & Dispatch Platform

GitHub

Key Skills: React, TypeScript, Vite, Flutter, Node.js, Express.js, Prisma ORM, PostgreSQL, JWT, Google OAuth, Groq, Docker, REST APIs

Built a full-stack fleet operations platform spanning a web command center and companion Flutter mobile client, covering organization management, driver/vehicle operations, trip dispatch, route planning, fuel and expense tracking, maintenance, and FASTag transaction workflows. Designed the Express/TypeScript backend with Prisma/PostgreSQL to serve both clients through REST APIs, enforcing tenant isolation and server-side role resolution for authenticated operations. Integrated an organization-scoped AI Copilot with role-allowlisted read tools and backend-only LLM credentials, and implemented FASTag webhook handling with HMAC verification and idempotent transaction matching. Structured the repository with documented docs/ and project_scaffold/ resources and containerized the stack with Docker Compose for consistent development environments.

DealOS – B2B Quotation-to-Cash Platform

GitHub

Key Skills: React 19, TypeScript, Vite, Node.js, Express 5, Prisma ORM, PostgreSQL, Zod, Razorpay API, Session Authentication, RBAC, Multi-Tenant Architecture, Vitest

Contributed to a browser-based quotation-to-cash workspace for Indian B2B revenue teams, covering customer management, quotations, approvals, orders, multi-warehouse fulfillment, invoicing, subscriptions, payments, and deal health in one organization-scoped application. The platform enforces organization data isolation and module-level authorization on the backend, with HTTP-only session authentication, CSRF protection for state-changing requests, Zod-validated APIs, immutable audit history, and idempotent workflow actions. Integrated Razorpay test-mode payment flows with signed webhook validation for payment reconciliation, and supported end-to-end workflow validation through backend unit/integration tests, frontend tests, and API workflow audits.

AssetFlow – Multi-Tenant Asset Governance Platform

Live

Key Skills: React, Vite, Node.js, Express.js, Prisma ORM, PostgreSQL, JWT, Zustand, Axios, RBAC, Multi-Tenant Architecture

Built a multi-portal, multi-tenant asset and resource governance platform with separate public, tenant, and Super Admin zones. Implemented organization onboarding with automatic tenant and first-admin creation, employee and role management, asset registration and lifecycle tracking, allocation and transfer workflows, resource booking with overlap detection, maintenance requests, and audit/reporting/notification pipelines. Designed the backend with Node.js, Express, Prisma, and PostgreSQL and enforced JWT-based authentication, role-aware authorization, and strict organization-level data isolation across tenant operations.

LEADERSHIP & ACTIVITIES

Vivacity, LNMIIT Jaipur <i>Artist Management Specialist</i> – Coordinated artist logistics, team scheduling, and event execution while collaborating across multiple operational teams.	Jaipur, India <i>Aug 2024 – Present</i>
--	--

ACHIEVEMENTS

- **Odoo Hackathon 2026 — Certificate of Participation:** Participated in the 24-hour hackathon, where our team developed DealOS, a B2B quotation-to-cash platform.
- **Data Structures & Algorithms:** Solved 300+ problems on LeetCode, strengthening problem-solving skills across data structures, algorithms, and competitive programming patterns.
